Detection Signals

01 Permission & Privacy Access Detection

Camera / Photo Library access	Health data access
GPS location access	Siri / voice analysis access
Microphone access	Bluetooth access (location-capable)
Local network access	Biometric authentication usage
Calendar access	Motion / activity tracking access
Contacts access	NFC access

02 System & Application Behavior Signals

Application logging inspection	Unsafe function usage detection
Cryptographic algorithm usage detection	Custom URL scheme registration
XPC / IPC communication detection	App Group ID detection
Backup sensitive data inclusion detection	Security attribute configuration inspection
ATS (App Transport Security) configuration analysis	PIE (Position Independent Executable) status check
Usage of malloc function	ARC (Automatic Reference Counting) status check
WebView component usage	

03 Data Handling & Privacy Signals

Keychain access detection	Keyboard cache data exposure
User tracking / device identifier usage	Clipboard usage detection
User identity information access	

04 Security Configuration Checks

Insecure random number generator usage	Device passcode requirement enforcement check
--	---

Weak cryptographic algorithm usage	Biometric authentication configuration validation
Insecure file protection attributes
